

Tips for measuring your Bedroom

We want to help you make the most of your space and create your perfect room. To do this, you'll need to get your measurements right, as they'll form the basis for your design.

So here's a **handy guide** so you don't miss any of those important measurements.

+ Don't forget switches, sockets and most radiators can be removed if needed.

1 Your floor plan

Sketch your room layout

- Turn over to draw your layout. All you need is the general shape.
- Mark the location of windows and doors.

Measure your room and openings

- The length and width of your bedroom.
- The widths of windows and doors from the outside of the frames.
- The corner of the room to the windows and doors, and the distance between windows and doors.

Make a note of any obstacles

- You might have a chimney breast, fireplace, radiators or sloping ceilings in your bedroom.
- Measure the width, as well as from the nearest fixed point to the middle of each obstacle.
- Note any plug sockets and light switches.

DON'T FORGET: switches, sockets and most radiators can be moved if needed.

2 Your wall plan

Measure your space

- The width and height at the five points as shown in the above diagram.
- This measurement is best taken approx. 60cm from the back wall to allow for your storage solution.
- Your ceiling height from a few areas for accuracy, including your sloping ceiling if you have one.
- The width and height where you have coving or skirting boards, as we'll need to take these into consideration.

TOP TIP: You might want to note down your measurements here stated in mm.

A-C Opening Height	
A:	<input type="text"/> mm
B:	<input type="text"/> mm
C:	<input type="text"/> mm

D-E Opening Height	
D:	<input type="text"/> mm
E:	<input type="text"/> mm

Measure your obstacles

- The depth and height of your obstacles, and from the floor to each obstacle, if you'd like your bedroom furniture built around it.

Once you've finished, it's always best to **double check your measurements for accuracy**

Disclaimer: If you provide us with measurements you must ensure they are correct and accurate. You are responsible for the accuracy of measurements you provide. If there is an error in the measurements you supply and the Products and/or Services are made or supplied to those measurements, we will not refund the cost of the Products and/or Services provided, unless the Products are faulty or we have failed to exercise reasonable skill and care.
