IDEALIST

Planting Instruction

1.
Cover the holes with mesh or broken pot crocks, to make sure that the soil cannot clog up holes.

2.
Raise the planters off the ground on feet to allow the planters to drain.

3.
Fill the bottom third of the planter with Lightweight Expanded Clay Aggregate to improve drainage.

4.
We recommend a soil-based potting compost when planting your plant.

5.
Try not to move the planter when it is planted up as the combined weight with the soil and the plant may damage it.
