# AMOS Eezy Grow Trio Propagator AM02277

## AMOS Warranty Information:

At AMOS, we stand behind the quality of our products. This electric heated propagator base is warranted against defects in materials or workmanship for a period of 12 months from the date of purchase.

Under this warranty, AMOS will repair or replace the heated base free of charge, provided the following conditions are met:

1. The product has been operated according to the instructions provided.
2. The product is returned to us within 12 months from the purchase date.
3. The product has been connected only to an appropriate electrical supply.
4. The product has not been altered, modified, or repaired by unauthorized individuals.
5. The product has not been subject to misuse, neglect, or damage.

If you experience an issue with the product, please contact our Customer Care Team for assistance:

Telephone: 0161 974 3580, Email: support@amos.co.uk

After contacting us, return the heated base in its original packaging (if available), along with proof of purchase and a completed Customer Return Form, to:

Customer Care Team

## AMOS GUIDE TO ELECTRIC PROPAGATING

Thank you for choosing the **AMOS Eezy Grow Trio Propagator**. This handy tool is perfect for any gardening enthusiast. It's designed to help you grow plants from seeds or take cuttings from your existing plants, making it a cost-effective and rewarding way to add beauty and variety to your garden. With its high-quality design, the AMOS Eezy Grow Propagator will provide you with years of gardening success.

---

### WHY CHOOSE AMOS PROPAGATORS?

With a focus on innovation and ease of use, Amos propagators with UV light setups are ideal for gardeners at any skill level. Whether you're starting with seeds, growing herbs, or nurturing delicate plants, this propagator provides the controlled environment necessary for success.

### WHY USE AN ELECTRIC PROPAGATOR?

Propagation works best with consistent heat, which can be hard to achieve during cooler months. The **AMOS Eezy Grow Trio Propagator** provides the gentle warmth needed to help seeds germinate and root cuttings.

This unit is ideal for indoor use where the room temperature stays above 10°C and is not intended for unheated greenhouses. The heated base warms the compost to the right temperature, but it won't feel hot to the touch. To check if the unit is working, turn it on, place trays of compost on the base, and feel the surface after two hours—it should feel warm.

---

### WHERE TO PUT YOUR PROPAGATOR

Place your propagator on a windowsill with plenty of natural light but avoid direct sunlight, which can overheat the unit.

---

### IMPORTANT SAFETY TIPS

Your **AMOS Eezy Grow Trio Propagator** is designed to meet strict safety standards, but here are some guidelines to ensure safe use:

- Keep water and electricity separate.** Never immerse the heated base in water.
  - Always remove the trays from the base before watering.
  - If the power cord is damaged, stop using the unit immediately, as the cord cannot be replaced.
- 

### GETTING STARTED

To grow healthy plants, you need three key things: heat, light, and water. The **AMOS Eezy Grow Trio Propagator** provides heat and light, but you'll need to check the moisture levels daily to ensure the compost stays moist.

**Compost Temperature:** For the best results, keep the compost temperature between 18°C and 22°C. Use a soil thermometer to check the temperature. The heated base will raise the compost temperature by about 8°C above the room temperature.

#### Temperature Control Tips:

- If the room temperature is already close to the ideal range, you may not need to turn the unit on.
- On warm winter days, turn the unit off during the day and back on at night when the temperature drops.

**Stay Clean:** Clean your equipment and workspace to prevent diseases. Sterilize old seed trays before use to keep your plants healthy.

### TIPS FOR SUCCESS

- Warm the compost to the correct temperature before planting.
- Label your trays to identify seedlings as they grow.

- Follow the instructions provided by your seed supplier for the best results.
- 

For detailed instructions, check out our **10 Easy Steps to Seed and Cutting Propagation** guide included with your propagator.

## **AMOS GUIDE TO SEED PROPAGATION**

### **1. Prepare the Trays**

Fill each seed tray to the top with quality seed compost and lightly dampen it using a fine spray.

### **2. Firm the Compost**

Gently press down the compost with a flat tool to create a smooth surface for sowing.

### **3. Sow the Seeds**

Place the seeds carefully between your finger and thumb instead of sprinkling them directly from the packet.

### **4. Cover the Seeds**

Lightly cover the seeds with finely sieved compost. Use a layer equal to the thickness of the seeds.

### **5. Water and Cover**

Water the seeds gently with a fine spray (do not overwater) and place the clear lid on top.

### **6. Choose the Right Spot**

Put the propagator in a well-lit area, avoiding strong sunlight that might harm young seedlings.

### **7. Reduce Humidity**

Once the seedlings appear, slowly open the vents on the lid to lower the humidity. When the air is less humid, you can remove the lid entirely.

### **8. Space Out the Seedlings**

If seedlings are crowded, use a dibber to carefully separate them. Thinning out weaker seedlings gives the healthier ones more room to grow.

### **9. Transplant Seedlings**

When the seedlings are large enough to handle, move them into larger pots or trays for more space. Always hold them by the leaves to avoid damaging the delicate stems.

### **10. Harden Off Before Planting Outside**

Let young plants adjust to outdoor conditions indoors first. Gradually expose them to outdoor temperatures but avoid frost, which can harm young plants.

---

## **AMOS GUIDE TO ROOTING CUTTINGS**

### **1. Prepare the Tray**

Fill the tray with quality cutting compost and dampen it using a fine spray.

### **2. Choose the Right Cuttings**

Select non-flowering, fast-growing shoots about 3 inches long.

### **3. Trim the Cuttings**

Use a knife to cut just below a leaf node (the point where a leaf attaches to the stem).

### **4. Remove Extra Leaves**

Remove all leaves except for 3-4 at the tip of the cutting.

### **5. Use Rooting Hormone**

Dip the cut end into hormone rooting powder (available at garden centres) and tap off any excess. This boosts the chances of successful rooting.

### **6. Plant the Cutting**

Insert the cutting about 1.5 inches deep into the compost and gently press the compost around it to secure it.

7. **Water and Cover**  
Water the cuttings lightly with a fine spray and cover them with the clear lid, ensuring the vents are closed to maintain humidity.
8. **Monitor Growth**  
Once new growth appears, gradually open the vents to reduce humidity. Remove the lid completely when the environment is stable. Most cuttings will root with patience.
9. **Repot the Cuttings**  
Once rooted, move each cutting into its own pot to give it more space to grow.
10. **Harden Off Before Planting Outside**  
Let the young plants adjust to outdoor conditions indoors first. Avoid planting outside if frost is expected, as young plants are very sensitive to cold.

## UV Light Setup (Not Included)

**Amos Propagators with UV Light Setup** Amos propagators are designed to provide an optimal environment for seed germination and plant growth. They come equipped with an innovative UV light setup, which can be easily installed by inserting it into the slot in the base of the propagator (UV Light not included). This user-friendly feature makes it simple to enhance your indoor gardening experience.

### Key Features:

- **Customizable Light Modes:** The UV light setup offers different light modes, enabling you to tailor the lighting conditions based on the needs of your plants or the growth stage.
- **Integrated Timer:** The timer function ensures consistent lighting cycles, which are essential for healthy plant development.
- **Dual Spectrum UV Lights (Red and Blue):** The UV setup includes red and blue lights, both of which are critical for plant growth:
  - **Red Light:** Promotes flowering and fruit production by supporting the later stages of plant growth.
  - **Blue Light:** Encourages vegetative growth and is particularly effective during seed germination and the early stages of plant development.

### Benefits of UV Lights for Plant and Seed Growth:

1. **Improved Germination:** UV lights provide the necessary energy to activate the germination process, stimulating quicker and more uniform seed sprouting.
2. **Enhanced Photosynthesis:** By mimicking sunlight, UV lights ensure that plants can carry out photosynthesis efficiently, which is critical for energy production and growth.
3. **Boosted Growth Rates:** Blue light wavelengths are particularly effective in accelerating leaf and stem development, leading to vigorous and healthy plants.
4. **Disease Prevention:** UV light can help reduce the risk of fungal infections and pests by creating an environment that is less conducive to their growth.
5. **Compact and Resilient Plants:** Proper light exposure, particularly red light, supports the development of stronger, more resilient plants that can withstand stressors such as transplanting.

With the **AMOS Eezy Grow Trio Propagator**, growing from seeds and cuttings is simple and rewarding. Happy gardening!
