

210.002 mm

Dear Customer

Turn on the water and the Hercul-Easy Hose expand in length by three times. Turn the water off, and it shrinks back in minutes to its original length for easy handling and space-saving storage. It won't kink, twist, tangle, freeze, crack or blow-back - and it's incredibly hard wearing with a patented construction that's anti-burst guaranteed. An independent UK lab tested Hercul-Easy Hose against named brands, which all split or burst after 8 days of continuous stress testing on machines. Yet the durable Hercul-Easy continued to work perfectly, and after 144 days (5 months) they switched the machines off - validating an 18 times longer working life. Engineered from the best materials for strength and durability, its virtually puncture proof and resistant to tears. Complete with anti-leak aluminium coated brass connectors, all-weather webbing that won't crack in freezing weather, it works with just 1.5bar water pressure (others need 3bar), and with most power washers up to 10.5bar. Supplied with FREE accessories; a 7-function spray gun, hose hanger, 1/2" and 3/4" tap connectors, 2 quick-release couplers and storage bag. From watering the garden to washing the car, the Hercul-Easy Hose does everything a good hose should do - only better...and for longer.

BEFORE USING YOUR HERCUL-EASY HOSE

Please check contents of the package which should contain:

- 1 x 7 Spray Head
- 1 x Hercul-Easy Hose
- 1 x Threaded Tap Connector
- 1 x Hose holder
- 1 x Storage Bag

Please be aware that the dye for the outer webbing may transfer when in contact with water. It is recommended that before first use you **soak the Hose in water for 10 minutes**. This will reduce the amount of dye transferred when in use.

Connect the spray head to the hose and connect the hose to the tap. Turn the tap on. As the hose begins to expand please stretch the hose out to its maximum length to release any tightness in the outer folded material covering. When the hose is fully expanded, turn the tap off and release the water by activating the spray head, and the Hose will contract to its original length

The Hose works on water pressure, without this pressure the hose will not expand to its maximum length. Consequently, if there is a loss in water pressure when in use the Hose will begin to contract. Please note that the maximum length of the Hose may vary +/-5% of the advertised length. Lack of water pressure can occur through one or all the following:

1. Water pressure can vary across the UK, it is best to contact your local water company to advise on available pressure. You will need at least 1.5 bar to make your hose work and 4 bar to make it fully stretch for optimum performance. The hose can be used with a maximum of 8 bar pressure.
2. If your garden tap is connected to another water mains or system there can be a sudden decrease in pressure if water is required elsewhere.
3. Pressure can be lost if the connections from the hose to the tap are not secured correctly.

142.5 mm

INSTRUCTION FOR USE

The Hose is supplied with quick-release couplers at either end. Firmly screw the appropriate tap connector onto your garden tap (Fig 1) (The Tap Connector can be attached to 2 sizes of threaded taps 1/2" or 3/4").

Now attach the quick-release coupler at one end of the Hose onto the tap connector (Fig 2).

Attach the spray head to the quick-release coupler at other end of the hose (Fig 3). Make sure all parts are FIRMLY connected before you turn on the tap.

NOTE

Turn the water tap on slowly, gradually increasing the pressure. The Hose will slowly start to expand. When the hose has fully expanded, press the trigger on the spray head to release the water. The spray head has 7 spray functions that can be selected by simply turning the dial clockwise or anti-clockwise. For constant spray lock the clip in place, and release once done.

When you are finished using the Hose; first turn garden tap off, and then press and hold the spray head trigger to release all the water. The Hose will gradually return to its original size.

To keep the trigger fixed in an "Open" position, squeeze the trigger and lock in place using the pin behind the trigger (Fig 4).

CHOOSE FROM 7 SPRAY FUNCTIONS

- | | |
|-----------|-----------|
| 1. Cone | 5. Centre |
| 2. Shower | 6. Flat |
| 3. Mist | 7. Full |
| 4. Jet | |

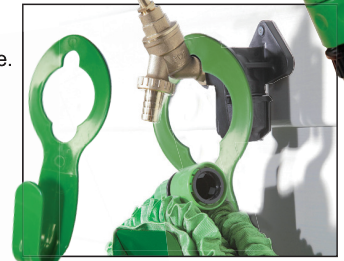

To adjust the nozzle rotate the spray head

HOSE HOLDER

The perfect way to store and hang your Hercul-Easy Hose.

Simply hang the Hose Holder on your garden tap and it is ready to store your Hercul-Easy Hose.

IMPORTANT SAFETY INSTRUCTIONS

When using the Hose, basic precautions should always be followed, which include the following:

- **Danger of suffocation!** Keep the packaging material away from children and animals
- The hose is not a toy.
- Keep animals and children away from the hose during and when not in use.
- Do not drink from the hose. When not in use bacteria, mould, insects and other harmful elements can breed inside
- Do not run hot water or steam through the hose
- Do not leave the Hose unattended when the water is turned on and its under pressure
- Completely drain the Hose when not in use
- Never pull the hose when disconnecting it from the tap connectors
- **Keep the hose away from extreme heat, oil, rough concrete and sharp edges**
- Do not run over the hose with a car, lawn mower, wheel barrow, etc
- Take care when bending the Hose around the corner of a building - rough masonry can damage the hose and cause punctures
- Do not use attachments that are not specifically recommended to be used with this Hose.
- The Hose is for domestic garden use and routine watering.

CARE AND MAINTENANCE

- **Ensure the hose is drained of ALL water**
- Remember to flush out your Hose each time before using it. This will help to remove any insects and any slime or bacteria that may be growing inside it.
- Best to store your Hose inside as when left outside it is exposed to mould and bacteria, garden and lawn chemicals, animal waste, insects, stagnant water and other potentially harmful substances.

TO LENGTHEN ITS LIFE:

- **Keep the Hose away from extreme heat, oil, rough concrete and sharp edges**
- Always store indoors, in a cool, dry place, in summer and especially in winter.
- Protect your Hose during the harsh winter months by ensuring its drained of all water before storage, as remaining water left in the hose can freeze, damaging the Hose.

WARNING

This product is intended for domestic use only. Subject to reasonable wear and tear and for the expected lifetime of the product. **Please Note:** Do not drink from the hose. Hoses can leach harmful chemicals including lead which can be extremely dangerous

TECHNICAL SPECIFICATION

Outer fabric: 400Dx800D Polyester
Inside Material: PVC+PU sleeve and 99% Latex inner.
