

02. Connect all the poles together

01. Position the tent with the rear to the wind.

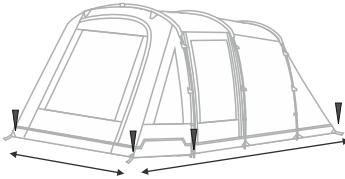

03. Insert each pole through its corresponding colour coded sleeve

04. Insert Pins in base of poles to one side, then on the other side, starting from the middle poles and working outwards
Flex and insert the pole end into the pins.

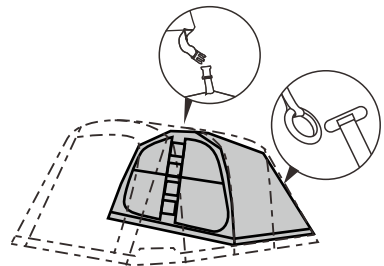

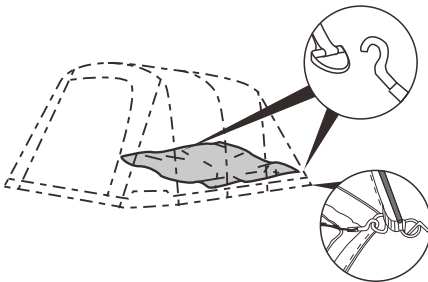

05. Attach the clips to the Poles

06. With all the poles inserted pull the tent out tight and ensure all pole ends are in a line and the tent is 'square', then tighten each corner strap to make the tent taut.

07. Attach the bedrooms by firstly connecting the corner hooks in the corners on the floor and the buckles where applicable. Then attach the toggles and eyes using the colour coding where applicable

08. Guy out all the guy lines, trying to keep them all aligned and even for support.
Tent Pegs should be inserted into the ground on a 45 degree angle. Tighten all the guy tension clips on a regular basis
