

NOPE!® Ant Killer Baited Gel MAGNUM GEL ANTS IGR

Product Description

NOPE!® Ant Killer Baited Gel is a practical and effective insecticide for amateur use against ants and ant nests in and around the home. The powerful gel formula attracts ants after several hours – worker ants carry the active ingredient back to the nest where it is distributed to other workers that, in turn, feed the queen and larvae. The bait spreads throughout the colony over several weeks. When the queen is eliminated, the colony is no longer viable and dies out. **NOPE!® Ant Killer Baited Gel** contains a bitter-tasting substance (Bitrex®), helping to protect children and animals.

Benefits

- Powerful gel formula
- Effective against domestic ants and ant nests
- Can be used in home & garden

Properties

Size(s) & Packaging	10g plastic syringe
Coverage	25m ² per 10g plastic syringe
Storage	Store in the original container tightly closed. Store in a cool, dry, well-ventilated place. It is recommended to keep the product at a temperature between 5 °C and 45 °C.
HSE No.	9977
Active Ingredient(s)	Imidacloprid (0.01%); S-Methoprene (0.084%)
Effective Against	Ants

Application Information

Always read the product label before use and take note of all the application instructions and usage regulations. After a thorough check to determine the level of infestation, dispense the gel bait in the areas where ants have been detected.

Before treatment, remove all natural sources of food from the infested area to increase the likelihood of worker ants ingesting the bait and taking it back to the colony. Do not expose the product to direct sunlight or rain.

1. Remove the yellow cap: push upward on the lid to release it (note that it is not threaded).
2. Push the plunger: gently squeeze the plunger to release a line of bait close to where the ants are active.
3. Replace the cap: after application, push the cap onto the syringe. Once opened, use within 6 months.

Apply approx. 0.04g of product per m², or up to 8g per ant nest.

Frequency of Application

During an infestation, inspect the Baited Ant Gel after 7 days and replace it if all the bait has been consumed. If the infestation persists, keep monitoring the product and replacing it as required until the infestation has ceased.

Wait 3 months after the infestation ends before the product can be reapplied.

Other Information

Store in the original container tightly closed. Store in a cool, dry, well-ventilated place. It is recommended to keep the product at a temperature between 5°C and 45°C.

Store in a safe place. Keep away from food, drink and animal feedstuffs. Keep out of reach of children and animals. Avoid release to the environment. Dispose of contents/container in accordance with local regulations.

Use biocides safely. Always read the label and product information before use.

For full health and safety information consult Safety datasheet (available on request). Always read the label.
