

NOPE!® Rat Killer

Product Description

NOPE!® Rat Killer is a fast and lethal rodent control bait. Rodents receive a lethal dose from just one feed. The active ingredient, brodifacoum, is one of the strongest available in the UK for rat and mouse control. **NOPE!® Rat Killer** sachets are edible and the grain is highly palatable to rats and mice. Contains a bittering agent to deter non-target species and an easily visible dye to differentiate the treated grain from untreated grain and consumed **NOPE!® Rat Killer** will dye rodent droppings helping to indicate the rodents are eating the bait and not just storing it away. Rat and mice infestations will typically be controlled within 4 – 10 days after consumption of the bait, but may take longer. Ensure sachets are fixed securely in the **NOPE!® Rodent Bait Box** and **DO NOT** come into contact with children or pets.

Benefits

- Lethal dose from a single feed
- Maximum strength poison
- Pre-packed for reduced handling
- Highly palatable grain bait

Properties

Appearance	Blue/green coloured grain
Coverage	<i>Rats:</i> 2 sachets (2 × 25 g) of bait per bait station <i>Mice:</i> 1 sachet (25 g) of bait per bait station
Size(s) & Packaging	6 × 25 g grain sachets
Registration Number	GB/NI-2016-1056-0010
Active Ingredients	Brodifacoum (0.0025 %w/w)
Storage	Store dry, cool and well-ventilated in the original sealed container.
Shelf Life	2 years

Application Information

Preparation

Before any treatment the site should be monitored to identify the species of rodent, their preferred routes, the size of the infestation, and the rodent's food and drinking sources.

Prior to the use of rodenticide products such as **NOPE!® Rat Killer**, non-chemical control methods (e.g. traps) should be considered. If using a rodenticide product, for improved bait acceptance, use a rodenticide bait that closely resembles the food sources the rodents have been consuming, as this increases the likelihood of them recognizing and ingesting the bait.

Take preventative control measures, such as plugging entry and exit holes and removing food and drinking sources, which are readily attainable for rodents (e.g. spilled grain, food waste or leaks) to improve product intake and reduce the likelihood of reinfestation. After treatment, avoid disturbing the area excessively as this may deter rodents returning to the area and reduce bait acceptance.

Application

Read and follow the product information as well as any information accompanying the product or provided at the point of sale before using it.

NOPE!® Rat Killer contains an anticoagulant substance. Do not use anticoagulant rodenticides as permanent baits (e.g. for prevention of rodent infestations or to detect rodent activity). If ingested by humans and non-target species, symptoms which may be delayed, may include nosebleeds and bleeding gums. In severe cases, there may be bruising and blood present in the faeces or urine. **ANTIDOTE: VITAMIN K1 ADMINISTERED BY MEDICAL/VETERINARY PERSONNEL ONLY.**

KEEP PETS AND CHILDREN AWAY FROM TREATED AREAS. Place **NOPE!® Rat Killer** treated bait boxes **OUT OF THE REACH** of children, birds, pets, farm animals and other non-target animals. Place bait boxes **AWAY FROM** food, drink and animal feeding stuff, as well as from utensils or surfaces that have contact with these. **DO NOT** place bait boxes near water drainage systems where they can come into contact with water.

When using the **NOPE!® Rat Killer** do not eat, drink or smoke.
Wash hands and directly exposed skin after using the product.

In case of:

- Dermal exposure – wash skin with water and then with water and soap
- Eye exposure – rinse eyes with eyes-rinse liquid or water, keep eyelids open for at least 10 minutes
- Oral exposure – rinse mouth carefully with water. Never give anything by mouth to an unconscious person. Do not provoke vomiting. If swallowed, seek medical advice immediately and show the products container or label. UK medical professionals should contact the National Poisons Information Service (www.npis.org) for further advice.
CONTACT A VETERINARY SURGEON IN CASE OF INGESTION BY A PET.

NOPE!® Rat Killer must be secured in the **NOPE!® Rodent Bait Box** (or a Bait station clearly labelled with all the following statements: “do not move or open”; “contains a rodenticide”; “the product name and authorisation number”; “the active substance(s)” and “in case of accident, call a poison centre”).

Pierce the sachet(s) on the included metal rod from the **NOPE!® Rodent Bait Box** and secure them in the bait box. **DO NOT** open the sachet(s) and pour the loose grain into the box.

Once **NOPE!® Rat Killer** is secured in a bait box, the box should be placed in the immediate vicinity where rodent activity has been observed (e.g. regularly used areas, nesting sites, food storage areas, holes, burrows). Where possible bait boxes must be fixed to the ground or other structures. Place the bait boxes in areas non-labile to flooding. Replace any bait in a bait box in which bait has been damaged by water or contaminated by dirt.

Because of their delayed mode of action, anticoagulant rodenticides typically take 4 – 10 days to be effective after consumption of the bait, but may take longer.

Mice

Bait stations should be visited every 2 – 3 days at the beginning of the treatment and at least weekly afterwards, in order to check whether the bait is accepted, the bait stations are intact and to remove rodent bodies. Re-fill bait when necessary. If more than one bait station is needed, the minimum distance between bait stations should be 2 – 5 m apart.

Rats

The bait stations should be visited 5 – 7 days after the beginning of the treatment and at least weekly afterwards, in order to check whether the bait is accepted, the bait stations are intact and to remove rodent bodies. Re-fill bait when necessary. If more than one bait station is needed, the minimum distance between bait stations should be 5 – 10 m apart.

Search for and remove dead rodents during inspections and re-filling of bait stations.

If the **NOPE!® Rat Killer** is untouched after 35 days the sachets should be removed to remove the risk of non-target species consuming the toxic bait. If the **NOPE!® Rat Killer** is still being consumed and rodent activity is still observed after 35 days, consideration could be given to contacting a professional pest control service.

Poisoned rodents should be double-bagged using plastic bags and either disposed of in a household waste bin with a secure lid to prevent access of wildlife and pets or collected by a specialist waste contractor or the local authority. Rodents can be disease carriers. Do not touch dead rodents with bare hands, use gloves or tools such as tongs when disposing of them.

Remove the remaining bait and/or the bait stations at the end of the treatment period. Dispose of uneaten bait and the packaging in accordance with local regulations. Waste bait should be double bagged in plastic bags and disposed of in a household waste bin with a secure lid to prevent access of wildlife and pets or should be taken to a civic amenity site. For information on civic amenity sites contact your local authority.

Other Information

Apply only in areas that are not liable to submersion or becoming wet, i.e. protected from rain, floods and cleaning water. Do not contaminate foodstuffs, eating utensils or food contact surfaces. Keep away from food, drink and animal foodstuffs. For use only in indoor areas for mice/ rats, and outdoor areas around buildings for rats only. Wash hands and exposed skin before meals and after use. Cover all water storage tanks before application. All bats are protected under the Wildlife and Countryside Act 1981. Before treating any structure used by bats, consult The Bat Conservation Trust and the relevant statutory authority for guidance and advice: Natural England, NatureScot or Natural Resources Wales. Do not contaminate waterbodies or watercourses with chemicals or used containers. The active substance in the product is known to develop resistance in some organisms (i.e. the product becomes less effective if used frequently). The product should be used with care and in accordance with the instructions for use, in order to limit the development of resistance in other organisms.

For full health and safety information consult the safety datasheet (SDS). **NOPE!® Rat Killer** is approved under the GB Biocidal Product Regulations for use as directed. GB/NI-2016-1056-0010. Use pesticides safely. Always read the label.
