

IMPORTANT INFORMATION ON OIL LAMPS

Our illuminating range of high quality outdoor oil lamps and torches will add a special glow to any occasion whether it be a wedding, dinner, event or simply a relaxing evening in the garden. They are all made from high quality stainless steel or copper making them strongly durable for outdoor use. They also come complete with fibre glass wicks which are long lasting.

For those of you who are new to oil lamps or aren't quite sure how these work here are a few how to's for you.

STEP-BY-STEP OIL LAMP GUIDE

1. To access the oil container, push down the metal wick holder and turn in an anticlockwise direction. Then simply fill with a suitable outdoor oil. Do not over fill the container as when oil heats it will expand slightly. Then screw the top back on. Allow the wick to soak for a minimum of 15 minutes. To ignite you can then simply place a lit match to the wick.
2. To fuel the torch you will need some good quality oil - We recommend the selection of Barretine lamp and torch oil which includes Citronella (great for fighting away the bugs and insects.) This is sold through our website.
3. All of the staked oil lanterns come with a spike which can be placed into soft ground. If you have a patio or terrace you can also place the stake into an oil lamp stand. Our stands are made to fit all of our oil torches except the Lucca range.
4. For each oil torch we have provided the oil capacity and estimated burn time on the website.
5. All oil lamps come with a snuffer to put out the flame and a filter to help pour the oil.
6. If the wick gets wet this will affect the flame's ability to burn.
7. It is always best to put the snuffer over the wick when the lamp is not in use.
