WARMROOM[®]

magnetic secondary double-glazing fixing tapes

Simple Instructions

- 1 The pack contains magnetic and steel tape with foam adhesive. You will also need a pen, a measuring tape & a pair of household scissors
- 2 Measure the window, leaving about a 1 cm gap for fitting, to determine the acrylic panel size needed. (Note: Acrylic panel not included)
- 3 Clean and prepare the surface
- 4 Remove the protective film from one side of the acrylic panel and apply the foam adhesive-backed magnet to the edge of the panel
- 5 Mark and cut the tape to the required length, pressing firmly into position
- 6 Create neat corners and continue around the panel
- 7 Attach steel tape to the magnet. (Note: Steel tape has sharp edges, use gloves if required. The steel tape may require stronger scissors)
- 8 Peel of the adhesive liner from the steel tape
- 9 Offer panel up to your window, lightly press into place to transfer the steel tape to your window frame, then remove the panel leaving the steel tape attached to the frame
- 10 Steel tape will now be in the perfect position on your frame, firmly press down to secure the steel tape to the frame
- 11 Re-attach the acrylic panel
- 12 Remove the protective cover. Panel can be easily removed for cleaning
