

# Speedy Seed® 5.6KG

Speedy Seed® Original is a mixture of grass seed varieties.

This amazing mixture will establish quickly, germinating within one week and creating a stunning healthy green lawn in record time. Ideal for new lawns or overseeding to restore an established lawn!

## TOP TIPS FOR BEST RESULTS EVERY TIME

Use **Plush Lawn Seed, Feed & Conditioning Mixture** a few weeks after the seeds have germinated to encourage a strong healthy lawn. For maximum results, store in a cool dry place and use within the season of purchase.

Protect your lawn from birds and other wildlife while seeds are germinating.

Wait until the risk of frost has passed before spreading grass seed. Frost will affect seed germination.

### FOR NEW LAWNS

1. Divide the area that you want to sow into easily manageable sections. A soft, warm, moist soil is best for seed germination.
2. Prepare the area by breaking up all clods and remove any weeds, stones and leaves.
3. Rake the soil to a depth of 8-10cm, the soil texture should resemble fine breadcrumbs.
4. Shake the seed mixture evenly over the area. Seed rate: 1.4kg per 42m<sup>2</sup>.
5. Rake the seeds lightly to ensure they make contact with the soil and are evenly spread.
6. Water well with a light spray. Keep the soil moist until the new lawn is well rooted but take care not to wash seeds away!
7. When the grass reaches approximately 8cm high mow for the first time.
8. Follow instructions for overseeding to fill any bare patches.

### CAUTION

THIS PRODUCT IS NOT FOR CONSUMPTION.  
Store safely away from animals and children.

### OVERSEEDING OR RESTORING A LAWN

1. Mow the grass as short as possible.
2. Rake out dead and dry grass cuttings and remove patches of moss.
3. Using a garden fork, spike the lawn about 8cm deep every 30cm. This boosts grass root growth and improves surface drainage.
4. Shake the seed mixture evenly over the area. Seed rate: 1.4kg per 84m<sup>2</sup>.
5. Rake the seeds lightly to ensure they make contact with the soil and are evenly spread.
6. Water well daily with a light spray and keep soil moist.
7. When the grass reaches approximately 8cm high mow for the first time.

Try to keep traffic on a freshly over-seeded lawn to a minimum for 7 to 21 days.

If your lawn is looking patchy, why not try Ultra Patch®, our amazing patch and repair mixture with pet urine neutraliser!

### Hints & Tips For Best Results

Sow when the risk of frost has passed, most seeds will not germinate below 5°C. Store in a cool dry place.

\*For best results sow when the ground is wet and above 10°C, ideally in late spring when the ground is warmer but there is still plenty of rainfall to help with germination. Also in late summer and into autumn.

Use a lawn fertiliser once seeds have germinated. Cover seeds with netting to protect from wildlife.

Seeds and grass are not for consumption, and wash hands after handling any seeds or gardening.
