

Neat.

NEAT GRIDS®

We are proud UK manufacturers of a ground reinforcement grid that is made from 100% recycled plastic. Neat Grids® offers an eco-friendly and SUDs Compliant grid that is a great alternative to concrete, tarmac or resin (also much cheaper!). Our grids are not limited when it comes to use, they can be used on Walkways, Outerhouse bases, Driveways, Car parks, Horse Paddocks and Shedbases (to name a few).

Neat Grids® is SuDs compliant thanks to its open structure which prevents surface water build-up and the effects of sudden and severe rainfall reducing the likelihood of local flooding.

Neat Grids® can be filled with Gravel (ideally 20mm) please use our gravel calculator to see how much you need. They are also great to use as Grass Grids, simply fill with soil and seed.

Specification

- ❑ Non-Toxic, chemically stable & plant and tree safe.
- ❑ 95% permeable & complies with SUDs and part m building regulations
- ❑ Complies with flood and water management act 2010
