

SOFA CARE GUIDE

We care about quality and have therefore created this simple Sofa Care Guide that will allow your statement pieces to stand the test of time.

Good Habits

- Regularly vacuum your sofa using the curtain attachment to stop dust from building up.
- Keep your sofa out of direct sunlight and away from heat sources such as radiators to avoid the colour fading.
- Plump your cushions daily to keep them in good shape for longer, it's like skincare for your sofa.
- Place some soft foot pads beneath the feet of your sofa and be sure to lift and move your sofa rather than dragging to protect your floors from scratches.
- Test all cleaning products in a small hidden area to be sure that it doesn't leave any marks or stains.
- Sofas are made for bottoms, not feet. Protect the integrity of your solid wood frame by ensuring your sofa is not mistaken for a trampoline.

Getting Acquainted

- We hope your sofa looks just as gorgeous in your home as you imagined it would. There may be a little bruising on the sofa when you first open it which can occur from packaging and transit, simply brush the fabric to freshen up and give your sofa a few days to get back to normal.
- Get working on your comfy position, your sofa will become increasingly comfortable as you wear in it. With that said, share the love! We recommend switching up your favourite seat from time to time and regularly flipping your loose cushions to allow for even wear across the sofa.

Accidents Can Happen

- Gently blot any spillages with a clean, dry cloth to soak up as much liquid as possible.
- Remove any light stains with a damp cloth and gently blot. Don't be tempted to use any strong chemicals or detergents.
- Noticed a scratch in your fabric? Gently tease fabric fibres back into position in order to have your sofa looking good as new.
