

SALVATERRA PRIME

GENERAL GUIDELINES

Filling, warnings and handling of the **SalvaTerra** system.

1 FILLING

Important: even if immediate planting of the vegetation is not planned, fill immediately with gravel to contribute to the stability of the self-supporting structure, unless anchored to the ground.

- ✓ Lightly compact each layer
- ✓ Moisten the soil after placement
- ✓ Carry out planting only after filling is complete

2 IMPORTANT WARNINGS

A WARNING: DO NOT BEND THE CABLES

Avoid bending or crushing the electrical cables and connectors. The bending radius must always be adequate.

B WARNING: DO NOT BREAK THE PANEL

Do not hit, drill or pry on the panel surfaces. Handle with care to avoid breakage or cracks.

DO NOT HIT

DO NOT DRILL

DO NOT PRY

3 TRANSPORT AND HANDLING

Transport: properly secure SalvaTerra to prevent movement and impacts during transport.

Handling: use a forklift for moving. Lift only from the designated points / pallet. Never lift from the upper edges or from the cables.

Warnings: avoid impacts, vibrations and drops that could damage the structure, panel, cables or components.

Check the integrity of **SalvaTerra** after transport and before installation.
