

Plinth Clip Fitting Instructions

Components

Your plinth clip set consists of:

1. **Fixing Plate** – attaches to the rear of the plinth.
 2. **Sliding Clip Section** – slides into the fixing plate and engages with the cabinet leg.
-

Tools Required

- Tape measure
 - Pencil
 - Screwdriver or drill/driver
 - Suitable fixing screws
 - Spirit level (recommended)
-

Installation Steps

1. Position the Plinth

Place the plinth in its intended location against the cabinet legs.

Mark the positions of the cabinet legs or fixing points on the rear face of the plinth. These marks will indicate where the clips should be fitted.

2. Fix the Plates to the Plinth

Position a fixing plate on the rear of the plinth at each marked location.

Ensure:

- The open end of the plate faces in the direction required for the clip to slide in.
- All plates are aligned at the same height.

Secure each fixing plate using suitable screws.

3. Insert the Clip Sections

Slide the clip section into each fixing plate until fully engaged.

4. Fit the Plinth

Align the clip sections with the cabinet legs or receiving brackets.

Push the plinth firmly towards the cabinet until the clips snap into place.

Check that:

- The plinth sits level.
 - The plinth is securely retained.
 - All clips are fully engaged.
-

5. Adjustment (If Required)

If the plinth is not correctly aligned:

1. Remove the plinth by pulling it away from the cabinet.
 2. Slide the clip sections out of the fixing plates if adjustment is needed.
 3. Reposition the fixing plates and refit.
 4. Reinstall the plinth.
-

Removal

To remove the plinth for cleaning or maintenance:

1. Grip the plinth close to a clip location.
 2. Pull the plinth away from the cabinet with steady pressure.
 3. The clips will disengage from the cabinet legs while remaining attached to the plinth.
-

Important Notes

- Use a minimum of two clips per plinth section.
- For longer plinths, fit additional clips at regular intervals for improved support.
- Do not overtighten fixing screws, as this may distort the fixing plates.
- Ensure all clips are aligned before fitting the plinth.

Tip: Test-fit the clips to the cabinet legs before fixing the plates permanently to the plinth to confirm the correct orientation.
