SOFT GREY

PERFORMANCE AT THE SERVICE OF DECORATION

With Renovation paints from V33, you can be sure that the result will be perfect and will remain so for a long time!

Find solutions developed for each surface, specially formulated to modernise and sustainably protect highly stressed surfaces.

So do not hesitate, renovate!

RESISTANCE & SUSTAINABILITY

The paint forms a mesh film hard enough to withstand impacts without deterioration. The paint is also formulated to prevent water, grease and detergents from scratching and staining the surface.

SEALING

The paint creates a durably impermeable barrier. The painted surface is then resistant to repeated water exposure.

AESTHETICS

The paints have very high coverage (98% minimum opacity) offering you a high quality finish, whatever the surface and material.

RENOVATION IT'S EASY

1. SURFACE PREPARATION

Preparation is a step that should not be neglected. Be sure to clean all your surfaces with a soda based cleaner (alkaline) like sugar soap.

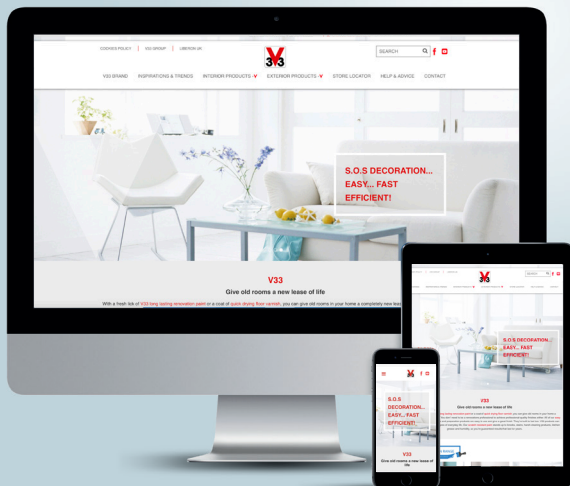

2. PAINT APPLICATION

- Apply the paint in 2 coats to guarantee the performance and strength. Use a roller suitable for painting. The quality of the tools used has an influence on the final result.
- Allow 6 to 8 hours between each coat and 24 hours for complete drying.
- Painting must be carried out at room temperature, between 12°C and 25°C (to avoid any risk of separation, blisters or traces of recovery).
- Optimum performance and strength of these paints is obtained after 20 days. Avoid asking too much of your surface during this time.
- You can maintain your painted surface with a non-abrasive sponge and mild detergent.
- Depending on the paint you apply, please refer to the instructions on the back of the tin.
